FEATURES

- Non rocking 3-point suspension design, for silent operation.
- Captive hinges reduce theft risk whilst allowing easy lifting.
- Frame gussets are supports which reinforce the corners where the frame sections meet, distributing stress evenly, preventing damage to the frame or the access cover.
- Holes in the frame flange where mortar can pass between the underside and top side, creating an interlock, providing greater strength.
- Surface texturing above and below the flange enables better mortar engagement, reducing any lateral movement which could result in cracking.
- Meets the requirements of CD 534 v0.1.0 (formerly HA 104/09).
- The enlarged frame corners help to dissipate loads onto the foundation, providing a longer service life and increased reliability.
- Keyway lifting points are provided on the frame for safe handling.
- Reversible hinge allows the grating to hinge with the direction of the traffic flow, improving safety.
